

Can you add Auracast™ support to existing devices?

Yes. A complete suite of retrofit solutions are in development.

Auracast™ dongles and streamers for phones, tablets, laptops, and TVs will be coming to market, transforming existing audio source devices into Auracast™ transmitters.

So too will plug-in adapters for commercial sound and public address systems, allowing public

locations to turn their venue into an Auracast™ location using their existing sound systems.

Other retrofit solutions including Auracast™ neck loops, standalone assistants, and smartphone applications from device manufacturers will help round out the retrofit ecosystem and enable users with legacy receiver devices to experience Auracast™ sooner than later.

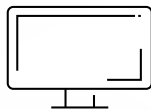

Dongles

(smartphones, tablets, laptops)

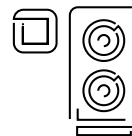

Streamers

(TVs, screens)

Adapters

(public address systems, sound systems)
