

Step-by-Step Guide: Create and Prepare Bluetooth® Launch Studio Project for Qualification Upgrade Program (QUP) - Qualification with No Required Testing

Use this guide for help upgrading your qualification to the latest version of the core specification when you have upgraded your product to the latest version and your qualification proposed to be upgraded (the “Existing Qualification”) only references a Qualified Design ID (QDID) that has already been upgraded to the latest version.

Creating a New Launch Studio Project for the Proposed Qualification Upgrade

The “Declared by” user of the Existing Qualification must:

1. Log in to Launch Studio.
2. Navigate to the “Getting Started” section in Launch Studio.
3. Select the option to “Start the Bluetooth Qualification Process with **No Required Testing**”.
4. In the “Project Basics” tab, enter a project name and enter the new QDID of the upgraded qualification referenced in your Existing Qualification.
 - Please note that any referenced QDID that has been upgraded must be based on the latest version of the core specification.

The screenshot shows the 'Project Basics' step in a multi-step process. The progress bar at the top indicates the current step is 'Project Basics', followed by 'Product Declaration', 'Declaration ID', and 'Review & Submit'. The main heading is 'Qualification Project with No Required Testing'. Below this is a link for help. The form contains two required fields: 'Project Name' with the value 'Example QUP Project' and 'Referenced Qualified Design' with the value 'Search by QDID'. A help icon is present next to the second field. Below the second field is a note: 'If you don't have this number, ask your supplier or Search Listings.' At the bottom, there are two buttons: 'Save and continue to Product Declaration' and 'Save All Changes'.
